Stakeholder Analysis

The main stakeholders were identified based on the people who will use the system, manage it, or be affected by the way it handles assignments and marks.

Stakeholder	Interest in the System
Administrator	Wants to manage users, user roles and system settings.
Lecturer	Wants to create courses and assignments, receive submissions, mark assignments and provide feedback.
Head of Department (HoD)	Wants to moderate marks before they are released to students and make sure assessment rules are followed.
Student	Wants to access courses, submit assignments, receive feedback and view marks after they have been approved for release.
Principal	Wants the system to follow school policies and make sure assessment results are properly controlled.
IT Officer	Wants the system to be secure, reliable and properly maintained.
Student Representative	Represents student concerns, especially regarding deadlines, late submissions and fair treatment.

Stakeholder Conflicts and Resolution

Some stakeholder statements conflicted with each other or were not clear enough to be directly implemented. The conflicts were resolved by giving priority to the school's assessment control requirements while also considering the needs of students and lecturers.

1. Immediate release of marks vs moderation

- **Lecturer's statement:** Students should see their marks immediately after the lecturer finishes marking.
- **Principal's requirement:** Marks must be moderated by the HoD before students can see them.
- **Conflict:** Marks cannot be released immediately if they still need to be moderated.
- **Resolution:** The HoD moderation requirement takes priority. A lecturer can mark and save the marks, but the marks remain unavailable to the student until the HoD has completed moderation and approved their release.

2. Late submission policy

- **HoD's statement:** A late assignment receives a 10% penalty per day for up to three days and then receives zero.
- **Student Representative's statement:** Late work should not simply be rejected.

- **Conflict:** The two statements give different expectations for what happens when an assignment is late.
- **Resolution:** The system will accept late submissions where they are still within the allowed period and automatically apply the 10% penalty per day. After three days, the submission will receive zero unless an approved extension applies.

3. Extensions and deadlines

- **Student requirement:** Students may need extra time when they have a valid reason.
- **Lecturer requirement:** Lecturers should be able to give individual extensions.
- **Ambiguity:** It was not initially clear whether an extension changes the normal deadline or applies to all students.
- **Resolution:** An extension will apply only to the selected student and assignment. The lecturer can set a new deadline for that student, and the system will use the new deadline when checking whether the submission is late.

4. Resubmission of assignments

- **Student requirement:** Students should be able to correct and resubmit their work before the deadline.
- **Lecturer requirement:** Lecturers need to know which submission should be marked.
- **Ambiguity:** It was not clear whether the system should replace the previous submission or keep all versions.
- **Resolution:** The system will keep the submission history, while the most recent valid submission before the deadline will be treated as the current submission for marking.

5. Changes to marks

- **Lecturer requirement:** Lecturers may need to correct marks.
- **School requirement:** Assessment records must remain controlled and traceable.
- **Ambiguity:** It was not clear how changes to marks should be tracked.
- **Resolution:** Every change to a mark will be recorded, including the user who made the change and the relevant assessment record. This provides a history of mark changes.
